COPYRIGHT: (C)1999,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To efficiently and effectively provide the information on an unsettled transaction at the timing of receiving existing service.

SOLUTION: A card application device to be executed by the method consists of each card storing identification(ID) information for identifying a person and the ID numbers of respective financial institutions, a terminal equipment capable of reading out information stored in a memory built in the card and writing information in the memory, a center device for storing card information related to the owner of each card, and a communication system connecting the terminal equipment to the center device. When the card of a certain owner is inserted into the terminal equipment and identification that the card is the owner's card is inputted, correspondence relation between the ID information stored in the memory and the card information stored in the center device is checked, information such as the balance information, unsettled information and usable remaining amount of the owner of the card is extracted and the extracted information is displayed on the terminal equipment.
